

Weekly Market Review January 23, 2025

<u>Overview</u>

We are watching cold weather invade the South again this week, which could slow production across all categories. Citrus and Mixed Hot Peppers are still firm, but despite the lower volume, Tomato quality and supply remain good. Green Pepper supply is good, but Squash is tighter this week. Mexico will also see a slowdown, with rain and cooler weather expected over the next several days. The Offshore Table Grape season is slowly moving along. Pricing is firm but should start to improve over the coming weeks. Honeydew will be a challenge over the next three weeks. The transition, combined with delays due to weather in South America, has limited availability and guality fruit. Flexibility is very important during this transition to limit the portions of Honeydew being served or substitute outright if there are any shortages. Supply should improve over the next three weeks; Pineapple and Banana supply will remain snug for the next month at the very least. The industry is experiencing a supply shortage, with limited medium and large fruit availability, leading to rising field and market prices. Small fruit availability is improving, particularly for sizes 70s and 84s. A high percentage of grade 2 fruit persists and is expected to continue. Although Super Bowl harvests have started, U.S. pulls have yet to begin. As shipments increase, current inventory levels are expected to decline. Mexico will continue harvesting at full capacity, albeit with ongoing limitations. While sufficient fruit supply is expected, elevated price points will likely remain. Prices are anticipated to remain elevated through February as the industry works to meet demand. The weather in Yuma in the mornings is still a bit chilly. Winds and morning freeze have become the biggest issues. Harvesting crews have seen some delays. Unfortunately, that means that long-term wind-related damage is a potential, and we could see a decrease in supplies. We are also seeing significant icing and blistering conditions in the Iceberg and Romaine across the Yuma Valley. We have added Lettuce items to the watchlist and will continue to monitor the situation. Even with the cold mornings, quality and supplies have continued to improve on the majority of the other wet veg items. Endive, Escarole, Cilantro, and Fennel are still escalated. Supplies remain an issue on those items, and that is driving the market. Bok Choy and Leeks have stayed at the extreme trigger. Spinach is also still escalated, and the market seems to be rising a bit. Red Cabbage and Celery are also still escalated. Supplies on all cabbage items have improved, but the cold weather is slowing down the plant growth. Red Cabbage and Celery should be coming off escalation soon if the supplies are not affected by the weather. As a reminder, some growers have items that do not transfer to Yuma, which means they will have fees throughout the Yuma season.

Alert List

- Asparagus ESCALATED
- Avocados ESCALATED
- Bok Choy **EXTREME**
- Cabbage, Red ESCALATED
- Celery ESCALATED
- Cilantro ESCALATED
- Endive and Escarole ESCALATED
- Fennel, Anise **ESCALATED**
- French Beans ESCALATED

Watch List

- 1. Banana and Pineapple
- 2. Broccolini
- 3. Cabbage, Green
- 4. Lettuce, Iceberg

Weather OXNARD, CA

- Hot Peppers (Shishito) ESCALTED
- Leeks EXTREME
- Melon Cantaloupe ESCALATED
- Melon Honeydew EXTREME
- Napa ESCALATED
- Parsley (Italian & Curly) ESCALATED
- Spinach ESCALATED
- Table Grapes ESCALATED
- 5. Lettuce, Romaine
- 6. Limes
- 7. Ginger
- 8. Snow Peas & Sugar Snap Peas

Fruits & Vegetables

Avocados: ESCALATED A harvest of 72.9M pounds was reported for week 3, with 67.5M pounds shipped to the U.S. Jalisco accounts for 10.5% of the volume sent from Mexico to the U.S. The Main Crop currently shows a dry matter estimate of 30.5%. Smaller sizes are more readily available in the field, while availability is limited on medium and large fruit. As a result, both the field and market prices are increasing. The extended rainy season has resulted in a higher percentage of grade 2 fruit. Harvest activity remains strong as the industry works to replenish inventories. However, restricted packhouse production hours imposed by the USDA have further limited packhouse capacities industry-wide.

Bananas: WATCHLIST Banana imports tightened up due to cooler and poorer-than-desired weather in the tropics. Import volumes will be increasing back to normal volumes over the next three weeks and we do expect to see minor pro-rates between now and then. Overall, banana quality is good.

Pineapples: WATCHLIST Pineapples will remain tight and are not expected to improve until the end of February, with peak volume hitting in May. Flexibility in sizes will be necessary over the next 4-6 weeks.

Table Grapes: ESCALATED Current table grape supply is tight but the quality on the offshore fruit is good. We are starting to see more greens arrive this week; red grapes will remain tight. There are a few lingering reds in the west, and quality on those will be fair at best. Markets are expected to remain firm until we see more Chilean fruit arrivals.

Berries

Strawberries: Supplies continue to increase out of multiple growing regions. Santa Maria's weather remains mild, with daytime highs in the high 60s and cool nights. Light rain this week and next is not expected to impact production significantly. Fruit quality is improving,

with reduced decay, though variability in size persists. Mexico continues to see warm daytime temperatures support steadily increasing production, but quality remains a concern with issues like bruising and white shoulders upon arrival in Texas. Warmer temperatures in Florida boost production and quality, though green tips remain from earlier cold snaps.

Blackberries: Out of Mexico, quality is strong, with medium to large berries showing good sheen and firmness. Some red cell regression and soft fruit are noted. Volumes are somewhat steady.

Raspberries: Out of Mexico, quality is good, with strong color and firmness, though occasional overripe or crumbled fruit is noted. Volume remains steady, with transfers to Texas ensuring freshness through the season.

Blueberries: Out of Mexico, volume is gradually declining, but another peak expected in February. Organics continue to experience a gap due to cold weather. Conventional and organic volumes remain relatively steady, with minor quality issues like shriveling and leakage. Out of Chile, cooler weather supports steady production, though volume is decreasing in northern regions. Peak exports are expected for another 7-10 days. Quality remains high with large, firm, and sweet berries, despite occasional slow-ripening issues. Delays at ports are noted. Organic blueberries have started in a small way out of Oxnard, CA.

<u>Citrus</u>

Oranges: We continue to see very good quality from California with very good supplies. Sizing continues to run heavy to 88s, 113s, and 138s. 72s and larger remain in lighter supply although the availability of larger sizes continues to improve.

Lemons: Good supplies continue with very good quality out of all growing areas in California. Sizing is running heavier to smaller sizes, but large sizing is available. Advanced ordering is recommended on large sizes.

Limes: WATCHLIST - The lime market has lost momentum as demand has been significantly impacted by extreme weather events across the U.S. Production is transitioning to the new crop, which will yield predominately small fruit throughout Q1 as large sizes will be scarce. With the transition to new crop, fruit color/quality has much improved, however, recent rain events will likely lead to conditional defects in the form of oil spots + styler-end breakdown, which generally appear after repack/sorting while the fruit is in transit. We still expect the market to strengthen in February and availability will decline due to low temperatures and recent rain, which is compatible with seasonal trends.

Imports/Specialties: California Mandarins and Grapefruit are seeing much better supplies with very good quality. Cara Cara volume is increasing with promotable volume continuing into January. Blood Orange volume continues to increase with very good quality.

West Coast Lettuce

Iceberg: WATCHLIST: Lettuce supplies and quality look okay. Weights are expected to be lighter than normal due to the blistering and peeling we are seeing from the frost. We are also seeing weak tips. Continuingly cool temperatures have kept production volumes a bit behind the forecasted schedule as well as causing harvest delays. We have added this item to the watchlist.

Iceberg VA: Quality and supplies look good, but the cool weather could be an issue in the next few weeks.

Romaine, & Romaine Hearts: WATCHLIST: Romaine and Romaine heart supplies are okay. For Romaine, we are starting to see a bit more maturity, but weight may be lighter than usual due to the issues from the frost. We have seen some clear epidermal peel, blistering and weak tips. Heart material is slowly increasing and allowing for lighter greens and yellows to be seen in the finished product. While supplies are currently steady despite slight delays, we are adding this item to the watchlist. The cold mornings could potentially affect quality and supplies next week.

Romaine VA: Quality and supplies are good but could be affected by the cool weather.

Green Leaf and Red Leaf: Overall quality and supplies look good. Weights and sizing look ideal.

Eastern and Western Vegetables:

Green Bell Pepper: Good supply available in Nogals and South Florida. Quality is mostly good.

Color Bell Pepper: Markets are beginning to ease back as crossings increase in Nogales and McAllen. Quality is good.

Mini Sweet Pepper: Supply stable this week loading in Nogales.

Mixed Chili Pepper: ESCALATED Supplies in general are good across most varieties out of Mexico: Jalapeno, Caribes, Serrano and Poblano were good this week. Shishitos are the shortest this week. Supplies are below forecast domestically out of Florida.

Eggplant: Overall supply is good from Mexico; domestic supply is limited. Quality is good.

Slicer Cucumbers: Good supply crossing through Nogales and McAllen as well as Florida. Quality is good.

English Cucumbers: Good supply available this week crossing from Mexico. Quality on new crop out of Mexico was good.

Pickles: Improving supply available crossing through Nogales. Quality is good.

Green Beans: Good supply available and quality is good crossing through Nogales as well as loading in Florida.

French Beans: ESCALATED Production and quality of Guatemalan crops continue to improve; however, vessel delays have negatively impacted shelf life. Meanwhile, cold weather has led to a limited supply of conventional French beans from Mexico.

Zucchini/Yellow Squash: Lighter volume due to the cooler weather has pushed fob prices higher this week. Overall quality is good.

<u>Herbs</u>

Basil supply and quality from Mexico are expected to be marginal at best due to the impact of cold weather. Tarragon and thyme face challenges due to lower-than-normal yields from Colombia and Mexico. Tarragon supply is anticipated to improve within the next one to two weeks, while thyme is expected to remain limited for three to four weeks.

Melons

Both cantaloupe and honeydews have reached "demand exceeds supply" levels due to the effects that followed Tropical Storm Sara in the fall. Although we are seeing lower yields on both commodities, we are in better condition on cantaloupe than the honeydew. We began advising three weeks ago of a volatile January and expect it to continue. We are recommending scaling back portion sizes, subbing to watermelon or other fruit items to limit the use of honeydew at this time.

Cantaloupe: ESCALATED Quality is good with strong netting and brix levels of 10-12%. Sizing will be mostly 9-12 ct; jumbo fruit will not be available. Demand will exceed through January as the rain from Tropical Storm Sara has impacted fields in Honduras and Costa Rica that were scheduled to begin harvesting in 2-3 weeks. Shippers with fruit from those regions are already advising customers that no promotional pricing will be provided over the next 2-3 months as there is concern with bacteria in fields negatively impacting yields. We will continue to monitor this situation and provide further input on future updates, but we are expecting higher markets to remain in place until steady arrivals and a good balance of fruit are available.

Honeydew: **EXTREME** With very limited supply reaching the ports again this week, offshore volume is down 30-50% (depending on field location and the amount of rain received) following TS Sara, there just has not been enough production to satisfy the industry. We will continue to fight this for several weeks; our suppliers are asking for flexibility in sizing and subs where necessary to maintain service levels, but we do expect to see significant pro-rates and a Force Majeure was declared by a shipper this week. If there is a need to sub, there should be a good supply of watermelon.

Watermelon: Lighter supply available and demand is light. Fruit is being harvested from Central Mexico as well as Mexico.

Mixed Vegetables

Artichokes: Supplies have improved, and the market is no longer escalated. Quality is okay and continuing to improve.

Asparagus: ESCALATED Caborca/San Luis continues with low volume due to cold temperatures. This should change in the next 7-10 days, depending on the weather. Peruvian volume continues to decrease due to quality and seasonality. Cold weather across the country continues to slow markets, even with less production.

Bok Choy: EXTREME Quality is good, but supplies are still limited. The light supplies are driving the market.

Broccoli/Broccoli Crowns: Quality and supplies have improved. It is cold in the mornings in Yuma and that is not helping the broccoli grow, but supplies seem to be steady. Floret Mini's are still tight, and some growers are extremely short on those.

Broccolini and Sweet Baby Broccoli: WATCHLIST Quality and supplies look good.

Brussels Sprouts: Quality and supplies look good.

Carrots: (JUMBOS, MEDIUMS and CELLOS): WATCHLIST Jumbo Carrot supplies are light, but supplies remain steady on all other sizes and packs with good quality.

Cauliflower: Supplies have improved, but quality is just okay. Weaker texture is still being reported and there is some mechanical damage and occasional bruising. Shelf life is showing overall good quality, though.

Celery: ESCALATED: Quality and supplies are improving. There has been some weak texture reported causing some mechanical damage. Growers are still able to cover contract business. Organic Celery is at the Extreme Trigger due to light supplies.

Corn: Lighter supply and quality available this week. Please note that winter corn will have a smaller barrel and length this time of year as well as see a lesser mature kernel. All due to Mother Nature; cooler temps and less sun impact the maturity of the crop.

Fennel: ESCALATED The fields are seeing lower yields and therefore there is a shortage in supply. Pricing will stay escalated until supplies improve.

KALE: Supplies have improved, and quality is good.

Leeks: EXTREME: Leeks are very tight right now and some growers are holding to averages. The market remains escalated.

Garlic: California Garlic is showing very good quality with lighter supplies. Demand is good.

Ginger: Supplies and market are steady.

Green Cabbage: WATCHLIST Supply and quality have improved, and the market looks steady but with the cold weather potentially affecting growth, we are going to add this to the watch list.

Green Onions: Supplies and quality look good.

Mushrooms: Supply is stable, and quality is good.

Napa Cabbage: ESCALATED Quality and supplies are improving but there is some insect pressure.

Parsley: ESCALATED (Italian & Curly): Supplies and quality have improved.

Rapini: Quality is good, but supply continues to be light. The market is strong and therefore the supplies will continue to be light.

Red Cabbage: ESCALATED- Pricing is still escalated in some markets. Quality is good but supplies are still light with some growers. The market remains very active.

Spinach: ESCALATED Supplies and quality are okay. We have seen some reports of weak texture, discoloration and wilting. The market seems to be rising again.

Snow Peas and Sugar Snaps: ESCALATED Western markets continue to be active. Snows and sugar snaps domestic supply is gapping, but Mexican production remains steady. Guatemalan snow peas and sugar snap production continues to improve, but humidity in the growing regions may cause quality issues

Onions:

The Pacific Northwest storage supplies generally take a bit of a price increase in early Q1. While this is no guarantee, we do anticipate this will be the case on white and red onions. White supplies were light to begin with in the PNW, and we do not anticipate relief there until Mexico begins crossing their supply, which should take place around the middle of Q1 in February. They are typically not very big red suppliers, so we may see the continued pattern of reds remaining elevated until we get into the Spring/Summer months in California. At the moment, all reports are that Mexico will have a healthy crop in terms of quality and volume. Because of this, we are not anticipating the market to be volatile in the near future. However, the Texas crop is still too early to predict. The onions are still far from 'made' that a weather event could still impact their crop. If that were to happen, we would likely see a swift increase on all colors and sizes near the end of Q1.

Potatoes:

No major changes are expected in the short term. Size profiles remain balanced at the moment, with volume deals on count carton sizes alternating a bit on a weekly basis— meaning one week it will be 40/50, and the next it will be 80/90. Overall, size does seem to be more plentiful than smaller size count cartons. We will likely begin to see Norkotah supplies taper off toward the end of Q1, with the majority of growers transitioning to Burbank's only during the beginning of Q2. When this takes place, we anticipate that supply could tighten up some as yields were believed to not be as plentiful in Burbank's as they were in Norkotahs this past year. It remains to be seen just how impacted pricing will be and on what sizes exactly. However, we do feel confident that we will not see a cheaper market than we are seeing today.

Tomatoes:

East Coast

- Round and Romas Tomatoes: Harvesting is now in full swing but may slow as a cooler weather pattern remains in place this week. We do expect to see markets remain stable. Quality is excellent.
- Snacking Tomatoes (Cherry, Grape and Medley): Good supply and strong quality available.

Mexico

- Round Tomatoes and Roma Tomatoes: Stable supply and good quality crossing through Nogales and McAllen. Quality has been good
- Snacking Tomatoes (Cherry, Grape and Medley): Steady supply available and Quality is good.
- Tomato on the Vine: Steady volume available this week.

Other Fruit:

Apples: Last year, Washington State Apple growers shipped just over 136 million boxes of Apples. This year's total is projected at 124 million. Prices will likely be higher this year and much more manageable of a crop.

Projections below Red Delicious – 4 million down from last Season Gold Delicious – 280,000 boxes down from last Season Gr Smiths – 1.1 million boxes down Fuji – 1.5 million boxes down Gala – 3 million boxes down Honeycrisp – 5 million boxes down Cosmic – Up 2.7 million boxes

Pears: The Northwest Pear Crop (Washington/Oregon) is substantially down from last season due to below average temps in late Feb/early March affecting bud development. The higher elevation areas in Washington were severely impacted, especially the Wenatchee Valley. The Oregon Growing Region was not affected as much as Wenatchee, Washington, but it was still impacted.

The Bartlett Crop out of the Northwest shows 3.8 million shipped last season vs a projected 2.9 million this year for a 14% decrease. It's not substantial in terms of overall volume, but it's still a factor. The cold temperatures will affect the grade, so more Fancy's will be packed than normal. Because the crop is smaller, the size profile has increased by 1 to 2 sizes. Barts to finish by the end of Feb./first part of March.

Anjous report at least a 30% total decrease, or 1.85 million boxes less than last year. Also, out of the Wenatchee Valley, there will be more fancy and, for the first time in many years, a 3rd grade Anjous packed. When we start to pack Anjous – I will share pics of 3rd grade, this will be your value pear. Anjous to start the week of September 16th, and if growers make it through June, I will be surprised.

Red Anjous are down 7% or 47,000 boxes, so it is nothing dramatic like the others. The question on Red Anjous is whether or not we will see smaller pears such as 120/135 cts. Red pears are supposed to be 1 to 2 sizes larger out of the PNW. Red pears have started with Starkrimsons and will transition into Red Anjou from November through May.

Bosc are down 63% out of the great Northwest, or 1.38 million boxes. This variety was mostly affected, and markets will be much higher than in previous years. Bosc has slowly started with a potential end date last January/middle of February.

Pomegranate: Good supply available this week.

Asian Pears: Peaking in volume. Quality is outstanding.

Tree Fruit: Improving supply on Peaches, Plums and Nectarines available.

Kiwi Fruit: Supplies fair out of California as well as offshore landing on the east coast.

Persimmons: Active markets and quality are good on both Hachiya and Fuyu.

Quince: Limited supply available this week.
