

Weekly Market Review May 29, 2025

Overview

Tariff Update: *President Trump has officially confirmed that tariffs under the USMCA (United States–Mexico–Canada Agreement) will not be implemented on fresh produce from Canada and Mexico. As such, shipments from these two countries will remain unaffected. However, a 10% tariff will apply to fresh produce imported from other countries, potentially impacting pricing and availability for products sourced outside of Canada and Mexico.*

South Florida is quickly winding down for the season and will continue to see more items transition to South Georgia. In Nogales and McAllen, we are seeing transitions well underway, particularly on Tomatoes as Sinaloa wraps up for the season and productions moves to Sonora, Jalisco and Baja. Quality remains strong on new crop out of Mexico; Florida may see some issues due to rain. We expect to see Tomatoes start in California, South Carolina and South Georgia early June. Mixed veg transitions are well underway to California and South Georgia. Good production is available on Corn and Green Bells out of Coachella this week, and quality is outstanding. New crop Slicer Cucumber is ramping up out of Georgia and Baja. Items that remain light in supply are premium sized Green Bells, Pickles, Shishito Pepper, Tomatillo, and Habanero. The offshore Table Grape quality and supply are stable on reds; greens are tight this week. Mexico is starting to cross fruit this week. Offshore Melons are on the backside of the season and volume will steadily decrease over the coming weeks; transition to desert fruit will start this week. Banana and Pineapple availability remains limited; shippers are asking we continue to be flexible on Pineapple sizes. Banana supply will be volatile over the next several weeks due to a labor strike in Panama impacting the global supply chain. We do not expect major shortages at this time and are keeping a very close eye on this situation. New crop available out of California on yellow/white Peaches, Cherries and Apricots, there are also Peaches available in the east out of Georgia and South Carolina; volume will gradually increase over the coming weeks. Plums are still a few weeks out. Avocado market conditions remain stable following the holiday, with healthy industry supply and steady demand heading into June. Total imports from Mexico continue to decline as the season winds down, and much of the remaining Mexican fruit, characterized by high dry matter, is staying in the domestic market. California production remains consistent, with excellent quality reported. Peruvian arrivals are increasing steadily on both coasts, supporting the launch of summer programs and seeing strong demand across all sizes. Total U.S. Avocado volume is expected to remain stable through June, with Peruvian shipments forecasted to double compared to 2024. As programs transition from Mexico to Peru, the market is expected to experience continued downward pressure on pricing, further easing the pressure on Mexican demand. Looking ahead, Mexico's next crop transition into Loca is likely to bring market shifts, as lower dry matter leads to longer ripening cycles and extended shelf life, necessitating adjustments to inventory pull strategies. While July 1st remains the official start date for Loca, recent years have seen delays due to insufficient dry matter, leaving the exact start date uncertain. The weather will be cool in Salinas with no rain in the forecast over the next week. It's around 10 degrees cooler than normal for this time of year. Hopefully this will not impact growth too much. We are still keeping an eye on the insect pressure. It has been minimal so far, but it is still early in the season. Overall, supplies and quality are still looking good. Lettuce supplies and quality are starting to change a bit with some growers due to Sclerotinia and INSV. There has been a decrease in supplies. We may see the market firm up a bit. Broccoli and Cauliflower are still okay, but we are seeing a bit of a decrease in supplies due to the cooler weather. Both of these items have been added to the watchlist. Broccolini is still a bit tight. The market has gone up and you will see some growers holding to averages due to the limited supplies. Spinach quality and supplies are just okay right now and is something we are keeping an eye on. Brussel Sprouts continue to be light in supplies. The market is no longer at the extreme level, but it is still escalated. Quality and supplies are improving. Jumbos are still limited, and sizing is leaning more towards small and medium. Bok Choy, Napa, Endive, Escarole, Fennel and Leeks remain escalated, with supply shortages driving the market for those items. Overall production in Salinas is still steady.

Alert List

- Avocados – **ESCALATED**
- Bananas – **ESCALATED**
- Bok Choy – **ESCALATED**
- Brussel Sprouts – **ESCALATED**
- Celery Organic – **ESCALATED**
- Endive and Escarole – **ESCALATED**
- Fennel, Anise – **ESCALATED**
- Hot Peppers (Caribe, Habanero and Shishito) – **ESCALATED**
- Leeks – **ESCALATED**
- Limes – **ESCALATED ON SMALL SIZES
EXTREME ON LARGE SIZES**
- Napa – **ESCALATED**

Watch List

1. Asparagus
2. Broccoli
3. Broccolini
4. Cauliflower
5. Celery
6. Cilantro
7. French Beans
8. Herbs
9. Lettuce Iceberg/VA
10. **Lemons – SMALL SIZES**
11. **Oranges – SMALL SIZES**
12. Pineapple
13. Ginger
14. Green Onions
15. Romaine and Romaine Hearts
16. Snow Peas & Sugar Snap Peas
17. Spinach
18. Table Grapes
19. Small Size Oranges and Lemons

Fruits & Vegetables

Tariff Update: *President Trump has officially confirmed that tariffs under the USMCA (United States–Mexico–Canada Agreement) will not be implemented on fresh produce from Canada and Mexico. As such, shipments from these two countries will remain unaffected. However, a 10% tariff will apply to fresh produce imported from other countries, potentially impacting pricing and availability for products sourced outside of Canada and Mexico.*

Avocados: ESCALATED The U.S. avocado industry closed last week at 57.5M pounds, aligning closely with the six-week average of 58M pounds per week. This volume stability has supported continued week-over-week declines in USDA pricing, particularly on 60s and larger fruit. Demand remains light, with promotional activity down 17% since week 12. Mexico's market share has dropped to 53%, and with Peruvian volumes continuing to ramp up, it's likely Mexico will fall below 50% within the next two weeks. There are approximately five weeks remaining in the 2024–2025 crop, with the Off-Bloom Crop (Loca/Mendez) projected to begin around its traditional July 1st start date. The 2025 Peruvian season is underway, with strong volumes shipping to global markets. The U.S. can expect promotional opportunities throughout the summer. California harvested approximately 15.8M pounds in week 21, with dry matter averaging 27%. The crop is peaking on 48s and 60s, and the season is in full swing, with strong volumes expected through June and a gradual tapering anticipated in July. Quality and eating characteristics remain excellent. Meanwhile, Colombia's Traviesa crop is progressing well, offering promotional volumes on medium and small sizes. Dry matter levels continue to improve as the season advances.

Bananas: ESCALATED Banana imports remain extremely light for the next 4 weeks. We continue to struggle with several challenges of recent including record demand and overall lighter supply from the tropics. We are also seeing some logistical challenges due to the labor strikes in Panama that are impacting the global supply. Due to these challenges, we could see minor pro-rates across the network over the next four weeks. Overall, banana quality has been good and improving as we enter the summer grow cycle. Overall inventories are light, and we are seeing higher turns at the port and ripening centers; some of the fruit may not reach optimum color prior to arrival. We are advising distributors and customers to keep a close eye on ripeness; there may be some need to keep a heavier than normal inventory on hand and self-manage color to protect from shorts.

Pineapples: WATCHLIST Pineapples will remain tight and are not expected to show any type of improvement until late May. We are suggesting flexibility in sizes to ensure stability of the supply chain. Overall quality and taste are good.

Table Grapes: WATCHLIST Stable supply is available on reds; offshore greens are winding down rapidly and markets are reacting. Mexico is just starting to scratch on green and reds; we may see supply gaps for the next 7-10 days on greens and recommend subbing to reds where needed. California mid to late June. Forecasted volume and quality expected to be stable once transitions are complete.

Berries

Strawberries: Overall volumes continue to improve with continued favorable weather. In Santa Maria, temperatures climbed into the low 70s, with overnight lows in the mid-50s. The forecast remains stable, with no rain expected and highs continuing in the low 70s. While minor tip issues persist, overall quality remains strong. With warming conditions, production is expected to ramp up again over the next one to two weeks. Last week marked peak production for many blocks, and volumes should hold through this week before gradually tapering. Organic volumes are building steadily, with peak levels expected between next week and early June, supporting a strong supply position into late June. In the Watsonville/Salinas region, the weather has been cooler but dry, with highs in the mid-60s and overnight lows in the upper 40s. Conditions are projected to improve next week, with temperatures reaching the upper 60s to low 70s. The cool weather has preserved excellent fruit quality, although some bruising and dry calyxes have been observed in select varieties. Organic fruit remains slightly behind conventional in size but maintains a strong overall quality. Production estimates continue to increase, with a seasonal peak expected in June. All pack sizes are currently available, supported by strong volume, excellent sizing, and consistent quality.

Blackberries: In Mexico, weather conditions remain hot with significant temperature swings, ranging from highs in the 80s to 90s and lows in the 50s, as the region enters its hottest period ahead of the June rains. Blackberry quality remains strong, with medium to large sizing, good sheen, predominantly black color, and firm texture. However, elevated temperatures have contributed to some quality challenges, including red cell regression, attached calyx, and occasional soft or leaking fruit. Volume is steady, though currently in a production dip expected to persist through early May. Peak volumes are anticipated from late May through June. Organic blackberry production is expected to resume in early May with limited volume, gradually ramping up toward the end of the month. In Watsonville, conventional production started with minimal volumes.

Raspberries: In Mexico, current weather conditions are hot with wide temperature swings, with daytime highs reaching the 80s to 90s and overnight lows in the 50s as the region enters its hottest stretch ahead of the June rains. Fruit quality remains strong, characterized by good red color, solid firmness, and mostly medium sizing, with some occasional larger berries observed. While some overripe and crumbled fruit is appearing due to the heat, harvest crews are working diligently to exclude compromised fruit from packs. Raspberry volume is currently in a dip, but steady increases are expected throughout May, followed by a brief slowdown from late May through June, with volume anticipated to rebound in July and August. Organic raspberry production is expected to resume next week, with volume gradually building. In Watsonville, conventional raspberry production is projected to begin in July, while no organic volume is expected from this region for the season.

Blueberries: Weather remains hot with wide temperature swings, with highs in the 80s–90s and lows in the 50s, as the region enters its hottest period ahead of the June rains. Conventional volume is declining weekly, with the season expected to wind down by July. Organic production is anticipated to resume in August. Overall quality is good, with strong flavor, bloom, and appearance, though some heat-related issues are present, including redberries, soft or leaking fruit, and shriveling. Out of Oxnard, temperatures rose slightly this week, with highs in the low 70s and lows in the 50s. Organic production has passed its peak and will decline steadily until the season ends in late May. Quality remains excellent, featuring strong size, bloom, and flavor. The region has seen hot weather, with highs in the upper 80s and lows in the 60s. Florida is currently at its production peak but will be declining shortly, though volumes remain 30–50%

below forecast due to earlier hurricanes, storms, and heatwaves. Only conventional fruit is being harvested. Despite the reduced volume, quality has been excellent. Weather conditions have been warm, with highs in the 70s–80s and lows in the 50s. The region is currently producing conventional fruit, with peak production expected shortly. Like Florida, yields are down 30–50% from original estimates due to prior weather events. The season is expected to conclude quickly by early June, and open market volume remains limited. Hot and sunny weather continues, with highs in the 80s and lows in the upper 50s in the Central Valley. Warm temperatures are accelerating both organic and conventional production. Organic volumes are at peak levels, continuing through mid-June. Initial conventional harvests have begun, with excellent quality observed. Peak conventional volumes are expected toward the end of May, although open market availability remains limited. Production is expected to begin around July, providing a transition into summer volume.

Citrus

Oranges: WATCHLIST ON SMALL SIZES Quality remains very good with good demand. Pricing on 88's and smaller continues to strengthen as the size structure is now trending heavier to larger sizes. Ample lead time will be necessary to place orders, especially on small sizes, with many shippers now holding to averages. In addition, the Navel season is expected to finish in early to mid-June depending upon the shipper. We are starting to see a few Valencia's being harvested, with very light availability on Valencia's towards the end of May with most shippers expected to start in early June. Early projections are for the Valencia crop to be lighter in volume this year compared to last year with the early fruit being smaller in size and large sized volume increasing as we move through the summer months.

Lemons: WATCHLIST ON SMALL SIZES We continue to see very good quality out of all growing areas in California with most shippers. 165's and smaller will continue to be in extremely light supply for the next several weeks, while mid-to-larger sizes, 140's and larger will be available with the market continuing to strengthen on smaller sizes. Ample lead time will be necessary to place orders, especially on small sizes, with most shippers still holding to averages.

Limes: ESCALATED ON SMALL SIZES & EXTREME ON LARGE SIZES Extreme shortages continue on large sizes (110's, 150's and 175's) as the high temperatures and lack of rain in the growing areas have accelerated fruit maturation, leading to the prevalence of smaller-sized limes (200's, 230's and 250's). The market remains elevated on large sizes and is expected to remain elevated for the next several weeks with increasing concern about fruit quality.

Imports/Specialties: Blood Oranges are still being packed but will be finishing for the season in early June. Sizing is running small. Cara's are also available and will be finishing soon as well. Supplies on California Mandarins have lightened up significantly, market is very strong and will be finished by the end of May. California Grapefruit is available with light supplies on Fancy grade; choice grade is available.

West Coast Lettuce

Iceberg: WATCHLIST Lettuce supplies and quality are good, but we are still seeing Sclero and INSV creeping into some fields. This will cause some growers to have decreased supplies. We expect to see the market firm up because of this.

Iceberg VA: Quality and supplies look good but could be affected by INSV if it persists in the fields.

Romaine & Romaine Hearts: WATCHLIST Romaine and Romaine heart quality and supplies are good. There have been some reports of fringe burns and light cupping. Insect pressure could become an issue as we get into Spring weather. We have also had some initial reports of small amounts of INSV and sclerotinia in some of the romaine fields. We are adding this to the watchlist as we monitor that situation. The market is starting to trend a bit higher.

Romaine VA: Quality and supplies are good but could be an issue if INSV persists in the fields.

Green Leaf and Red Leaf: Quality and supplies look good.

Eastern and Western Vegetables:

Tariff Update: *President Trump has officially confirmed that tariffs under the USMCA (United States–Mexico–Canada Agreement) will not be implemented on fresh produce from Canada and Mexico. As such, shipments from these two countries will remain unaffected. However, a 10% tariff will apply to fresh produce imported from other countries, potentially impacting pricing and availability for products sourced outside of Canada and Mexico.*

Green Bell Pepper: Seeing short supply in Nogales, particularly on large sizes. Coachella is now in full production with good supply on all sizes with larger sizes catching a premium. South Florida is about done and transition to South Georgia well underway. Quality is good in all markets.

Color Bell Pepper: Good supply available in Nogales and South Florida. Quality is mostly good. Canada volume on HH Bells is good and quality is outstanding. We should see some La Rouge yellow and reds out of the desert as well as South Georgia by mid-May.

Mini Sweet Pepper: Supply stable this week loading in Coachella and Florida.

Mixed Chili Pepper: ESCALATED Supplies in general are good across most varieties out of Mexico, but quality is mixed. We should scratch new fields in Sonora over the coming weeks which will improve supply and quality. Jalapeño and Poblano were lighter this week.

Habanero, Tomatillo and Shishito will be the shortest and could see some supply interruptions. California should start production in early June and South Georgia over the next 7 to 10 days.

Eggplant: Domestic supply is ramping up out of the desert, and quality is outstanding. South Georgia expected to scratch next week.

Slicer Cucumbers: Stable supply crossing through Otay, Nogales and McAllen. Florida is done and we have completely transitioned to South Georgia. Quality is very good in all shipping points

English Cucumbers: Good supply available this week crossing from Mexico. Quality on new crop out of Mexico was good.

Pickles: Stable supply expected over the coming weeks out of South Georgia.

Green Beans: Good Supply available with new crop beans coming available out of Georgia and Florida. Coachella should ramp up over the next week. Quality is good.

French Beans: WATCHLIST Production in Guatemala continues to improve, showing signs of recovery. Meanwhile, French bean supply out of Mexico remains strong, supporting overall market stability.

Zucchini/Yellow Squash: Good volume available in South Georgia, Florida is mostly done for the season. In the west we are wrapping up the Sonora season and will transition to Baja as well as California. Quality is good.

Herbs: WATCHLIST Out of the East, basil quality continues to be impacted by persistent rain in Colombia. Imported chervil volumes are limited due to adverse weather conditions in Ecuador. Meanwhile, out of the West, basil supply and quality are steadily improving. Supply on all other herbs remains stable.

HERB	SUPPLY	QUALITY	COUNTRY OF ORIGIN
Arugula	Limited	Marginal	USA
Basil	Very Limited	Marginal	USA/MEX
Opal Basil	Very Limited	Marginal	USA

Lemon Thyme	Steady	Steady	USA

Lime Leaves	Steady	Steady	USA
-------------	--------	--------	-----

Melons: Offshore season is expected to wrap up this week and completely transition to the desert.

Cantaloupe: Yuma is picking up momentum and sizing will improve as we start to see a more typical pattern of 9s followed by 12s. Jumbo fruit still has not made an appearance as of yet, but we will likely start to see those once the next block of fields break by early next week. Field reports show excellent quality from the desert. Fruit is strong externally with very good color and internal brix levels mostly in the 13-15% range consistently.

Honeydew: Honeydew production has started off strong and is coming in with an excellent mix of 5s and 6s. Similar to the cantaloupe, no jumbo fruit has been seen yet but those will be right around the corner as well. The domestic dews are mostly clean with occasional scarring showing which is common in the desert due to higher winds in the region throughout the growing cycle. Brix levels on the dews are mostly in the 12-14% range.

Watermelon: Watermelon volume is steady out of Mexico and Florida; growers are making dealing on all sizes. Quality is outstanding.

Mixed Vegetables

Tariff Update: *President Trump has officially confirmed that tariffs under the USMCA (United States–Mexico–Canada Agreement) will not be implemented on fresh produce from Canada and Mexico. As such, shipments from these two countries will remain unaffected. However, a 10% tariff will apply to fresh produce imported from other countries, potentially impacting pricing and availability for products sourced outside of Canada and Mexico.*

Artichokes: Quality and Supply are good.

Asparagus: **WATCHLIST** Baja continues to produce at low volumes due to ongoing weather challenges. Peru has reduced its export volume, driven by increased domestic and Canadian production, which is absorbing more local supply. In Michigan, while overall volume remains good, colder night temperatures have slowed production this week. As a result of these factors, markets are slightly more active, responding to the tightened supply from Peru and slower production out of Michigan.

Bok Choy: **ESCALATED** Quality is good, but supplies are still limited. The light supplies are driving the market.

Broccoli/Broccoli Crowns: Quality and supplies are good with the majority of the suppliers, but a few growers are reporting being light on supplies.

Broccolini and Sweet Baby Broccoli: **WATCHLIST** Quality is good, but supplies are light with some growers. You will likely see some growers holding to averages over the next few weeks.

Brussels Sprouts: **ESCALATED** Quality and supplies are improving. Seeder and sizing still lean towards medium and smalls. Jumbos continue to be very limited. Insect injury and elongated core are some of the main obstacles. The market has eased up a bit and is no longer at the extreme level but is still escalated.

Carrots (JUMBOS, MEDIUMS and CELLOS): The Desert growing regions are finishing for the season and will be transitioning to the Central San Joaquin Valley and southern Monterey County growing regions for the summer with good supplies and very good quality.

Cauliflower: **WATCHLIST** Quality is good, but supplies are light with some growers.

Celery: **WATCHLIST** Quality is good, but supplies are light with some growers. Sizing has shifted towards 30/36ct. Some growers will transition to Salinas in June and that will also cause supplies to tighten up. The Organic Market is increased.

Corn, Sweet: Excellent supply out of Coachella and Brawley has started while volume remains steady out of Florida with Georgia on the horizon. Quality is good in all locations.

Fennel: **EXTREME** The fields are seeing lower yields and therefore there is a shortage in supply. Pricing will stay escalated until supplies improve.

Kale: **Supplies** have improved, and quality is good.

Leeks: **ESCALATED** Leeks are very tight right now and some growers are holding to averages. The market remains escalated.

Garlic: The 2024-2025 California Garlic season is coming to an end and as is sometimes the case during the transition from old crop to new crop garlic, there is a supply gap before the new California harvest begins. Starting the week of May 19th, we will see growers supplementing with product from Mexico to Bridge the Gap until new crop California Garlic gets started the first week of August. Quality will remain very good through this transition.

Ginger: Supplies and market are steady.

Green Cabbage: Supplies and quality look good.

Green Onions: WATCHLIST Supplies and quality look good but there have been some initial reports of light supplies.

Mushrooms: Promotable volume available and quality is good.

Napa Cabbage: ESCALATED- Quality and supplies are improving but there is some insect pressure.

Parsley (Italian & Curly): ESCALATED Supplies and quality look good.

Rapini: Quality is good, but supply continues to be light. The market is strong and therefore the supplies will continue to be light.

Red Cabbage: WATCHLIST Quality and supplies are good.

Spinach: WATCHLIST Supplies are limited with some growers and quality is good. We have seen some reports of weak texture, discoloration, wilting and there has been some insect damage, but it is all minimal right now.

Snow Peas and Sugar Snaps: Guatemalan snow pea supply is limited, while sugar snap production remains steady. However, quality concerns may arise due to elevated humidity in the growing regions. In contrast, Mexican production of both snow peas and sugar snaps is stable, supporting overall market availability.

Onions:

The onion market is not expected to react much until the Northwest is entirely out of the picture. At this point, we do not anticipate that it would take place until May. Even then, there may still be some leftover product floating around in that region. Texas onions are just getting going and they are expected to have a big crop. Additionally, Southern California will start in about 4 weeks, and they are also expected to have a lot of product. So, the first 2 months of Q2 (April/May) there is not presently a lot of optimism. However, June is a bit of a wildcard. At that point, Texas is done, the Northwest is done, Southern Cal will be mostly finished, and we will be exclusively into New Mexico and Central California at that time. It is basically a fresh start during that time, so the market has as good of a chance of improving as it does staying stagnant.

Potatoes:

The market remains stable, though carton production is starting to decline. With Norkotahs expected to phase out over the next 3-4 weeks, supply will shift solely to Burbanks, leading to a notable drop in production. As production decreases, we anticipate some market increases. However, if demand increases, the market could strengthen significantly, though that remains uncertain. Planting for the upcoming season will take place throughout April, with acreage expected to be similar to the current year. Given the depressed market conditions this season, there is some concern about similar supply levels next year, particularly if yields remain consistent.

Tomatoes:

Tariff Update: *President Trump has officially confirmed that tariffs under the USMCA (United States–Mexico–Canada Agreement) will not be implemented on fresh produce from Canada and Mexico. As such, shipments from these two countries will remain unaffected. However, a 10% tariff will apply to fresh produce imported from other countries, potentially impacting pricing and availability for products sourced outside of Canada and Mexico.*

East Coast

Round and Roma Tomatoes: Light volume out of Palmetto, Wimauma and Wachala will continue to decrease over the coming week or so and transition to Bainbridge and parts of South Carolina. We may see some volatility over the coming weeks but barring any major weather events due to these transitions. Current quality will be mixed. Tennessee expected to scratch mid to late June.

Snacking Tomatoes (Cherry, Grape and Medley): ESCALATED Lighter supply available due to the rain, quality remains good.

Mexico

- **Round Tomatoes:** Plenty of new crop production available out of Jalisco, Baja and parts of Central Mexico. Markets are firm and demand higher on larger fruit. Seems the size curve is spreading out on the crop. Quality is outstanding on new crop while there are still some lingering quality issues with residual winter production.
- **Roma Tomatoes: Snacking Tomatoes (Cherry, Grape and Medley): Steady** supply and light demand have put downward pressure on fob pricing; quality remains good.
- **Tomato on the Vine:** Stable volume available this week.

California

- Forecasted to start in 7-10 days.

Other Fruit:

Apples: Organic Apple and Honeycrisp supplies remain extremely limited out of Washington. Pricing has risen significantly and is expected to continue increasing until the next harvest.

Pears: The Northwest Pear Crop (Washington/Oregon) is substantially down from last season due to below-average temps in late Feb/early March affecting bud development. The higher elevation areas in Washington were severely impacted, especially the Wenatchee Valley. The Oregon Growing Region was not affected as much as Wenatchee, Washington, but it was still impacted.

The Bartlett Crop out of the Northwest shows 3.8 million shipped last season vs a projected 2.9 million this year for a 14% decrease. It's not substantial in terms of overall volume, but it's still a factor. The cold temperatures will affect the grade, so more Fancy's will be packed than normal. Because the crop is smaller, the size profile has increased by 1 to 2 sizes. Barts to finish by the end of February/beginning of March.

Anjous report at least a 30% total decrease, or 1.85 million boxes less than last year. Also, out of the Wenatchee Valley, there will be more fancy and, for the first time in many years, a 3rd grade Anjous packed. When we start to pack Anjous— this will be your value pear. Anjous to start the week of September 16th, and if growers make it through June, I will be surprised.

Red Anjou's are down 7% or 47,000 boxes, so it is nothing dramatic like the others. The question on Red Anjou's is whether or not we will see smaller pears such as 120/135 cts. Red pears are supposed to be 1 to 2 sizes larger out of the PNW. Red pears have started with Starkrimsons and will transition into Red Anjou from November through May.

Bosc are down 63% out of the great Northwest, or 1.38 million boxes. This variety was mostly affected, and markets will be much higher than in previous years. Bosc has slowly started with a potential end date last January/middle of February.

Pomegranate: Limited availability.

Asian Pears: Lighter volume, good supply on larger sizes.

Cherries: New crop Available out of California!

Tree Fruit: New crop Peaches and Apricots now available out of California. Peaches are now available in South Carolina and Georgia as well.

Kiwi Fruit: Supplies fair out of California as well as offshore landing on the East Coast.

Quince: Limited supply available this week.
