

Weekly Market Review July 2, 2026

Overview

Tomato production will slowly increase over the next two weeks out of South Carolina, Tennessee and Virginia. Mexico's production appears to be lighter on rounds while rounds are flushing. Snacking tomatoes are still very short this week, most likely due to pre-Fourth of July retail demand. We are also seeing excellent supply from our California tomato partners. The lime market will begin to ease as more volume crosses the border, with peak sizing concentrated on smaller fruit. Sizes 175s and larger will remain short, making substitutions to smaller sizes necessary for the next several weeks. Hot pepper production is expected to stabilize most varieties; however, shishito, habanero, and red fresno peppers continue to be the shortest. Table grape supplies are tight this week due to the transition from Mexico to California. We may also see increased demand for table grapes and stone fruit as melon supplies remain very short heading into the Fourth of July holiday.

The market remains active, particularly on iceberg and romaine. While overall quality and supplies have improved, disease pressure continues to reduce harvestable acreage. Growers anticipate this will remain a significant factor impacting supplies throughout the season, and leafy green availability is expected to remain challenging throughout the summer months. Broccoli and cauliflower are also beginning to experience quality and supply challenges as we move into July. Cauliflower and Asian Cut crowns are currently escalated, with the market continuing to trend upward. Based on current conditions, expect all broccoli and cauliflower items to be escalated in the near term. Artichokes, anise (fennel), and Brussels sprouts remain in limited supply. Artichokes and anise continue to be at extreme price levels due to ongoing supply constraints.

The avocado market remains stable as production from Mexico, California and Peru are contributing plenty of supply for the current US demand. Mexico is harvesting more of the Flor Loca crop, and we will soon see a shift in their size profile to smaller fruit. California still has approximately one month of strong volume remaining before the season begins to wind down. Peru is expected to continue sending steady volume for the next month. California production on cantaloupes has begun in a limited way; supplies are expected to be tight for the next 2-3 weeks. A limited number of shippers are offering specialty melons, such as Lemon Drops and Canary Melons, as alternative options for customers. Honeydew volume from Mexico remains low, keeping the overall market tight as California is only at the start of harvesting. Pineapple availability has improved and is expected to remain strong over the next two to four weeks.

Berry supplies remain mixed this week as the seasonal transition continues across several growing regions. Strawberry and raspberry availability remains favorable with good overall quality, while blackberry supplies continue to be limited due to reduced Mexican production despite improving California harvests. Blueberry production is shifting from Mexico into California and the Pacific Northwest, where quality is excellent, but weather could create short-term supply fluctuations. Overall, berry quality remains strong across all categories, with regional production changes expected to be the primary driver of availability over the coming weeks.

Citrus markets are experiencing tight supplies on smaller sizes across many varieties, including lemons, navels, and valencias, with fruit generally trending large. Some suppliers are holding averages on lemons. Please remain in close contact with your supplier on this matter and provide ample lead time. California valencias are beginning and some suppliers are reporting seasonal supply challenges, with some needing to substitute imports to cover contracts. Grapefruit supplies are currently stable. Please begin considering imports for this summer, as they will offer relief on strained sizing, particularly for East Coast demand.

Freight: Limited trucks and record high fuel costs are putting upward pressure on rates daily. We are seeing several freight companies, including sea freight companies, implementing fuel surcharges which will impact cost inputs.

Fuel Surcharges: We will continue to closely monitor fuel costs, which have been steadily increasing and impacting all aspects of operations, from field activities to freight. These rising costs affect not only the broader business but also the individuals who keep operations moving, including drivers and field crews. Fertilizer costs are also rising significantly and will directly impact growers moving forward. The recent call for a ceasefire has temporarily suspended these conversations; however, depending on the outcome of future discussions, surcharges could still be implemented over the next few months.

Alert List

- Asparagus – **EXTREME**
- Artichokes – **EXTREME**
- Beans, Green – **ESCALATED**
- Broccoli Crowns Asian Cut – **ESCALATED**
- Cantaloupe – **EXTREME**
- Cauliflower – **ESCALATED**
- Celery Organic – **EXTREME**
- Fennel, Anise – **EXTREME**
- Honeydews – **EXTREME**
- Lettuce, Iceberg – **ESCALATED**
- Limes (175's and larger) – **ESCALATED**
- Pepper Green Bells – **ESCALATED**
- Romaine – **ESCALATED**
- Romaine Hearts – **EXTREME**
- Sugar Snap and Snow Peas – **ESCALATED**
- White Asparagus – **ESCALATED**
- Tomatoes, Snacking (Grape and Cherry) – **ESCALATED**

Watch List

1. Blackberries
2. Blueberries
3. Broccoli
4. Brussels Sprouts
5. Cabbage, Green
6. Cauliflower
7. Herbs
8. Ginger

- 9. Small Citrus Sizes across all Varieties
- 10. Sugar Snap and Snow Peas

- 11. Table Grapes
- 12. Tomatoes: Round and Roma - EAST COAST

Fruits & Vegetables

Tariff Update: President Trump has officially confirmed that tariffs under the USMCA (United States–Mexico–Canada Agreement) will not be implemented on fresh produce from Canada and Mexico. As such, shipments from these two countries will remain unaffected. Tariffs will remain in place on certain items and countries such as Colombia until new trade agreements are reached.

Avocados: Mexico sent 34.2 million pounds to the US last week, dry matter remains high at 36% for the main crop while Loca's dry matter has increases to 25.6%. California harvested 17.8 million pounds and has an average dry matter of 28%. Peru increased with 13.5 million pounds. The Mexican Loca crop is still a couple weeks away from providing meaningful volume. We can expect to see a shift in dry matter, from 36% to the mid to upper 20% and in the size profile, favoring smaller fruit.

Bananas: Banana supply will be stable, but production curtailed due to virus pressure, low yields, and rising costs. Though quality is very good and current supply is adequate, consistency will be crucial. To navigate the coming year, ensure consistent supply, maintain regular ordering patterns, and proactively address any potential issues impacting the banana program. Bunker rates will be released this week and next, expect them to be higher due to rising fuel costs.

Pineapples: The Pineapple market has improved and volume from Costa Rica has increased. Suppliers are expecting this extra volume to last for a few more weeks before the market starts to tighten up again. Overall, the quality and taste are good.

Table Grapes: **WATCHLIST** Quality will improve dramatically as we transition to California this week; there will still be some Mexican fruit in the supply chain but it's declining rapidly. Red production out of California has started and is strong; however, it is approximately 2-3 weeks earlier than normal, which may affect the back end of the season. We will need to keep a close eye on this as the season progresses. Greens are limited this week but should ramp up over the next 10 days. Black production will also increase over the next week. Overall supply and quality look very good for the next several weeks.

Berries

Strawberries: Strawberry availability continues to be driven by Watsonville and Salinas as the Santa Maria season has transitioned out of the fresh market. Supplies remain strong although growers anticipate a slight decline in production over the coming week. Overall quality is good with only minor bruising and soft skin reported, and current pack counts remain consistent.

Blackberries: **WATCHLIST** Blackberry supplies remain limited as Mexico continues to experience reduced production due to seasonal pruning. Quality ranges from fair to good in Mexico, where recent heat and rainfall have affected berry size and firmness, while Watsonville is producing excellent quality fruit with strong firmness, flavor, and appearance. California production is expected to build over the coming weeks, although overall market availability is likely to remain tight until volumes improve.

Raspberries: Raspberry supplies remain favorable with excellent quality reported from both Mexico and California. Mexico continues to produce peak volumes with good color, firmness, and flavor that are expected to continue for the next several months. Watsonville harvests are off to a strong start with excellent fruit quality, and production is expected to increase meaningfully as the season progresses.

Blueberries: **WATCHLIST** Blueberry supplies are transitioning between growing regions as Mexican production continues to wind down while California and the Pacific Northwest steadily increase harvests. California fruit is reporting excellent quality with increasing volumes, though overall regional availability remains somewhat limited. Pacific Northwest harvests are ramping up with outstanding quality, but forecasted rain across Washington and British Columbia could temporarily tighten supplies.

Citrus

Limes: ESCALATED Supply continues to improve despite heavy rains in Mexico but still experiencing issues with sizing on fruit out of Mexico and other regions across Central America; the size distribution will continue to skew heavy to 230 ct and 250s. Unfortunately, this is leaving larger sizes such as 175's and larger extremely tight. We are also seeing moderate pressure on quality with imperfections present, such as oleocellosis. Markets are expected to remain firm through June and going into the 4th of July with World Cup taking place here in the United States expecting to keep summer demand higher than normal. Due to limited sizing on the larger end of the scale, we are still seeing a need to sub over to smaller sizes for the next few weeks.

Lemons: 140/165/200's are tightening up. Some suppliers will not take new volume on smaller sizes until supplies improve. There are also averages in place.

Navels: Manifest is peaking on 72/88's. Extremely tight on 113's and 138's. This is also putting pressure on the 88's; be prepared to be offered 72's on many orders.

Valencia's: California Valencias have begun and are projected to have similar issues on sizing.

Mandarins: Mandarins are finishing up and imports are coming in. Be in contact with your supplier on other varieties or imports as alternative options.

Grapefruit: California grapefruit available!

West Coast Lettuce

Iceberg: ESCALATED Lettuce quality is good, but supplies remain limited. Weights will be light but are improving. Shortened shelf-life issues should still be expected. Growers are holding to averages

Iceberg VA: ESCALATED Quality is good, but supplies are limited. We have seen reports of short shelf life, insect pressure, and mildew in bags. Growers are holding to averages

Romaine & Romaine Hearts: ESCALATED Romaine and Romaine hearts quality is good. Supplies remain limited but have improved. There are still some reports of bruising, fringe burn, light weights, and mildew on the outer leaves. The market is trending down. Romaine hearts are still at the extreme level but are trending down

Romaine VA: ESCALATED Quality is good and supplies are improving. We are still seeing more core in the bags and some mildew.

Boston/Butter Lettuce: Quality and supplies look good.

Green Leaf, Better Burger and Red Leaf: Quality and supplies are good.

Green Bell Pepper: ESCALATED Light supply out of South Georgia and South Carolina in the East and (Arvin) in the West. Quality is good out of all regions.

Color Bell Pepper: Good supply available out of Bakersfield, Baja and South Georgia this week. Quality is outstanding on open field varieties. The Hot House pepper category is steady out of Canada and Mexico. Overall quality is good.

Jicama: Stable supply and good quality available.

Mini Sweet Pepper: Supply slowing improving this week. Quality remains good.

Mixed Chili Pepper: Supplies stable on most varieties. Decent numbers crossing from Mexico; Coachella and South Georgia are ramping up as well. Markets remain very short on Habanero, Fresnos and Shishito. Fresnos - we recommend subbing to Red Jalapeño.

Tomatillo: Good supply and quality available this week.

Eggplant: South Georgia is done and we will transition to the next regions; Coachella is done and transitioned to the Central Valley. Quality is fair. Mostly seeing choice available with #1 fruit being limited. This should improve over the coming weeks as production improves, and fields are cleaned up.

Slicer Cucumbers: Supply crossing through Otay Mesa and McAllen will tighten up as the season starts to close and transition to Baja. In the East, we are seeing good supply out South Georgia. Quality is good from all shipping points.

English Cucumbers: Excellent supply out of Canada and still some crossings available in McAllen. Quality is good.

Pickles: Lighter supply available out of South Georgia and Mexico. Quality is good.

Green Beans: ESCALATED Lighter supply out of South Georgia and Kentucky in the East. Out West, Brentwood and Baja supplies are limited. Quality is hit and miss.

French Beans: Availability remains good this week, providing consistent market coverage. Demand has softened compared to recent weeks, helping support overall supply, while quality has been reported as good across current harvests. However, soft markets are likely to be short-lived due to limited green bean supplies.

Zucchini/Yellow Squash: Steady supply on green and yellow out of South Georgia and Fresno. Quality is good.

Herbs: WATCHLIST Basil supply and quality continue to improve. Supplies remain steady with fair quality across most other herb varieties, with the exception of savory and lemon thyme.

Melons

Cantaloupe EXTREME: California's initial harvest produced good sizing and quality, but supply remains limited. Production is getting ready to move from Southern California to Los Banos. There are still some suppliers with limited availability in AZ. There were some areas in Yuma that were affected less by whiteflies and viruses, but the market will be extremely limited.

Honeydew EXTREME: Honeydew harvest started slowly this week, enough to mix and match some orders to go with the cantaloupes. Mexican production is still down, and the market is limited with high pricing. California will have more volume in two weeks, and we can expect the market to calm down.

Watermelon: The market has tightened up some due to lack of product out west, forcing the Southeast to handle all US demand. The Fourth of July pull will put upward pressure on pricing and will remain increased until mid-July. The quality out of GA and FL has been good.

Mixed Vegetables

Artichokes: EXTREME Quality is good, but supplies are light, which is driving the market. Growers are holding to strict averages but prorates should be anticipated

Asparagus: EXTREME Peru and Mexico continue to experience production challenges due to weather impacts, including the effects of Super El Niño in Peru. Combined supplies are estimated to be 30 to 35% below normal, with XL and Jumbo sizes remaining extremely limited over the coming weeks. Spot availability is expected to remain very tight as demand continues to outpace available supply.

Bok Choy: Quality is okay and supplies are limited.

Broccoli Florets/Broccoli Crowns: WATCHLIST Quality and supplies are good. A few reports of browning and pin rot continue. Asian Cut crowns are now escalated.

Broccolini and Sweet Baby Broccoli: Quality is good, but supplies are still limited with some growers.

Brussels Sprouts: WATCHLIST Quality is fair and supplies are limited. Growers are still combating insect pressure and internal browning. The weather in MX is warming up and that is also causing quality issues and reduced yields there. Growers are holding to strict 10-week averages and are expecting the market to tighten further. Supplies will be limited until July, and the market is rising due to the limited supplies.

Carrots (JUMBOS, MEDIUMS and CELLOS): Quality is good and supplies have improved. The market has finally recovered.

Cauliflower: ESCALATED Quality is good but supplies are tightening up. Growers are starting to hold to averages. Market is trending up.

Celery: Quality and supplies have improved. Disease pressure is still a factor, especially on organic celery but overall quality and supplies look good. Organic Celery is still at the extreme level.

Corn, Sweet: Lighter supply going into the Holiday out of South Georgia in the East and Brentwood out West. We expect to see higher demand and higher market pricing through mid-July. Quality is good out of all regions.

Fennel: EXTREME Lower field yields have caused a shortage in supply. Pricing will remain escalated until supplies improve. Some growers are holding to 8-week averages, though prorates have been observed.

Kale: Quality and supplies look good.

Leeks: Quality and supplies look okay.

Garlic: Quality remains good, although supply is snug on this Garlic crop. Continue to purchase steadily to ensure product as the year progresses.

Ginger: Supplies and markets are steady.

Green Cabbage: WATCHLIST Supplies and quality are good.

Green Onions: Supplies and quality are good.

Mushrooms: Supply is expected to be steady for the next several weeks. Quality is good. We do expect to see some cost increases over the coming months. In recent years, Canadian mushroom farmers received unfair subsidies, giving them a clear advantage over the domestic mushroom farming industry. The USDOC ruled that Canadian growers were receiving unfair subsidies on fresh mushrooms from Canada and will see duties applied from 1.62–4.97%. These duties will be applied once the ruling is formally published. This will not only increase the price of imported mushrooms from Canada but will also put upward pressure on the price of domestically grown product as well; this is something domestic growers have been seeking for some time to support the increases in their operating costs over the past five years.

Napa Cabbage: Quality and supplies have improved.

Parsley (Italian & Curly): Quality and supplies are good.

Rapini: Quality is good, but supply continues to be light. The market is strong and therefore the supplies will continue to be light.

Red Cabbage: Quality looks good, but supplies are light.

Spinach: Supplies and quality look good.

Spring Mix: Supplies and quality look good.

Snow Peas and Sugar Snaps: ESCALATED Market conditions remain steady across both Guatemala and Peru, with availability continuing to be somewhat limited. Supply levels are generally unchanged from last week, and Peruvian snow pea volumes are expected to remain light over the coming weeks. Demand remains steady, while quality continues to be reported as good across both commodities.

Onions:

New Mexico volume has dropped off as suppliers deal with lower yields and seeder issues. Suppliers in California are also dealing with low volume as they work through transition challenges. Having issues in both New Mexico and California is leaving the market limited on all sizes and colors, while pricing has jumped quickly. Production is expected to pick up in a few weeks.

Potatoes:

The market has strengthened as the size profile has shifted to finish out the last year's crop. Suppliers are seeing a shift in the size profile towards smaller count sizes 70-120ct while 40-60cs have become tighter. Suppliers are watching inventories closely to make sure there is enough to last until new crop and to check for quality issues. Shippers are requesting additional lead time and some flexibility on sizing when possible.

Sweet Potatoes: The sweet potato market has tightened as the industry moves into the final stretch of the 2025 storage crop. Limited supplies remain available nationwide, but inventories are gradually declining, particularly on premium U.S. No. 1 grades and larger counts. Demand from both retail and foodservice continues to remain steady to strong, supporting a firmer market heading into summer. North Carolina and Mississippi growers are reporting lighter yields and tighter availability due to weather-related challenges from last season. Quality remains generally good; however, some lots are showing increased cosmetic defects and shrink tied to weather stress from last growing season. New crop harvest is expected to begin in limited volumes during August, with broader availability arriving in September.

Tomatoes:

Tomato Suspension Agreement Update

Currently, duties are being imposed on Mexican tomatoes. We do expect to see some reporting from the ITC on the impacts of duties and anti-dumping violations sometime this year. NO major immediate changes are anticipated.

East Coast

- **Round and Roma Tomatoes: WATCHLIST** Volume will be lighter this week on rounds out of South Georgia and South Carolina due to weather-related pressure combined with high demand for pre-Fourth of July retail pulls. We expect to see these numbers improve over the coming weeks when Tennessee and North Carolina begin harvesting somewhere around July 10th. Quality is mixed out of all regions.
- **Snacking Tomatoes: Grapes, Grape Medley and Cherry Tomato: ESCALATED** Lighter volume this week on grapes, medley and cherries due to transition and higher holiday demand. Markets expected to remain active through the 4th. Quality is fair at best.

Mexico

- **Round Tomatoes:** Supply will remain snug on mid-sized fruit this week on rounds; markets were mixed but seem to be easing back some as demand winds down for the Holiday pull at retail. Quality is outstanding on what is crossing this week.
- **Roma Tomatoes:** Excellent supply and quality available out of Jalisco and Baja.
- **Snacking Tomatoes: Grapes, Grape Medley and Cherry Tomato: ESCALATED** Grape Tomato and Cherries are very short this week due to lighter harvesting and higher demand. Medleys seem to be readily available. Quality on what is crossing the border has been good on all varieties.

California

- Supply continues to improve as we see steady availability across the Golden State! Crops look amazing; we expect a great California season on vine ripens as well as mature greens.

Other Fruit:

Apples: As we move through the summer storage season, Washington apple inventories continue to trend below both last year and historical averages across many key varieties, supporting the firm pricing environment that has developed throughout 2026. According to the most recent storage reporting, total conventional apple inventories stood at 39.4 million cartons, down 12% from 44.9 million cartons last year and slightly below the three-year average of 40.4 million cartons. The market will remain elevated until new crop apples start in August.

Pears: D'Anjou availability is tight and primarily limited to US #1 grade fruit. The market remains stable, with supply expected to continue until new crop Bartletts arrive in August. **Red D'Anjou** pears are moderately available in US #1 35–55ct sizes and should remain in the market for another month, with new crop **Starkrimson** pears expected to start mid-August. Both **Bartlett** and **Bosc** pears are currently gapping until their respective new crop harvests in mid-August and early September.

Pomegranate: Limited supply out of Israel.

Asian Pears: Lighter volume, good supply on larger sizes.

Cherries: Good supply out of Washington State. NEW CROP.

Stone Fruit: Steady supply out of California.

Papaya: Maradol are steady out of Mexico, while Solos and Hawaiians are tight.

Mangoes: Steady supply out of Mexico, Peru and Puerto Rico. Varieties: Tommys and Ataulfo.

Kiwi Fruit: Supplies fair out of California as well as offshore landing on the East Coast.

Quince: Limited supply available this week.
