Weekly Market Review
November 12, 2026

Overview

Tomato supplies will continue to be a struggle for the next 2-3 weeks with occasional supply interruptions possible, particularly on Rounds and Grapes. The Lime market remains firm across all sizes. Hot Pepper production is expected to tighten up on several varieties with quality being mixed. U.S. Table Grape availability will start to decline daily as the season comes to a close. Greens are currently the shortest. Offshore availability was limited this week but expected to improve by end of month. Cremini Mushrooms are in short supply due to production declines and yield losses caused by green mold. In addition, costs are expected to rise across the domestic supply chain, particularly growing and operating costs. Pineapple size curve will shift and may need to substitute sizing through the holiday.

Salinas production continues to be impacted by insect pressure, INSV, and Sclerotinia, but the Salinas season is coming to an end. Supplies on some commodities remain limited, but production in Huron and Yuma is beginning to alleviate the pressure on Salinas supplies. Quality issues will continue as disease and insect pressure remain, particularly in Leafy Greens and Cauliflower. Cauliflower supplies remain extremely limited, and the market is at the extreme level. We are now in the middle of transition, and supply and quality challenges will continue until production settles into Yuma. We anticipate gradual improvement in pricing and quality as Yuma production becomes more established.

Avocado supply recovery remains slow as controlled harvesting schedules reduce weekly volumes by approximately 30% and delay inventory replenishment. Saturday training requirements and Mexico's Monday holiday will limit next week to four harvesting days, adding pressure to already limited supplies. Current availability is concentrated in 48- and 60-count fruit. Pricing remains elevated and is expected to stay firm for the next several weeks, with limited availability and potential prorations continuing as inventories gradually recover.

Strawberry supplies remain extremely limited as California production declines and Mexico and Florida slowly increase volume, with additional California rainfall threatening further reductions and continued prorations. Meaningful strawberry supply relief is not expected until the second or third week of December. Blackberry volumes remain relatively steady in Mexico, although organic availability is light and Watsonville production is winding down, with occasional softness and leaking reported. Raspberry supplies are steady this week, but rain-related quality concerns and reduced shelf life could tighten availability and support higher pricing. Blueberry volumes from Peru remain slightly below expectations with excellent quality, and supplies are expected to improve in December as Mexico and Chile increase production.

Citrus markets are projected to continue experiencing tight supplies of smaller sizes, as fruit generally trends larger. A warm, wet winter is anticipated, and suppliers will work to mitigate potential supply disruptions caused by rain-related harvest delays. Navels are in full swing and seedless lemons are available. Cara Cara Oranges are anticipated to begin in mid-to-late November.

Freight: Limited truck availability and record-high fuel costs are putting upward pressure on rates daily. We are seeing several freight companies, including ocean freight providers, implement fuel surcharges that will impact cost inputs.

El Niño: While it's still too early to predict how severe the impacts of El Niño will be, we do know that impactful storms will likely hit the Central Coast. We will be adding updates as we receive them, but for now all indicators are pointing towards a strong El Niño taking shape over the next several months. Yuma is seeing increased precipitation, so growers are placing crops across various growing regions to try to mitigate supply issues. The growers do have plans in place and will be acting accordingly to try to minimize the effects of the weather event as much as they can.

Alert List

- Asparagus – **EXTREME**
- Avocados – **EXTREME**
- Boston/Butter Lettuce – **ESCALATED**
- Cabbage – **ESCALATED**
- Cauliflower - **EXTREME**
- Cilantro - **ESCALATED**
- Green Leaf – **ESCALATED**
- Lettuce – **ESCALATED**
- Limes (175's and larger) – **ESCALATED**
- Napa – **ESCALATED**
- Parsley Italian – **ESCALATED**
- Red Leaf – **ESCALATED**
- Romaine/Romaine Hearts – **ESCALATED**
- Strawberries **– ESCALATED**
- Snow Peas **– EXTREME**
- Tomatoes, Rounds, Romas – **ESCALATED**
- Tomatoes, Grape and Cherry (Snacking) – **EXTREME**
- Tomatillo and Hot Pepper (All Varieties) - **ESCALATED**
- White Asparagus – **ESCALATED**

Watch List

1. Blackberries
2. Broccoli
3. Celery
4. French Beans
5. Herbs
6. Ginger
7. Small Citrus Sizes on Lemons/Oranges
8. Mushrooms – Cremini (Limited)
9. Pineapples
10. Potatoes
11. Raspberries
12. Sweet Potatoes
13. Table Grapes

Fruits & Vegetables

Tariff Update: *President Trump has officially confirmed that tariffs under the USMCA (United States–Mexico–Canada Agreement) will not be implemented on fresh produce from Canada and Mexico. As such, shipments from these two countries will remain unaffected. Tariffs will remain in place on certain items and countries such as Colombia until new trade agreements are reached.*

Avocados: EXTREME Avocado supply recovery remains slow as new harvesting controls limit the industry's ability to rebuild inventories following the shutdown. Under agreements between growers and Local Plant Health Boards, harvesting is being reduced approximately 30% from weekly levels, with several boards temporarily suspending operations today, tomorrow, and Monday. Saturdays are now designated for phytosanitary training, limiting regular harvesting to weekdays, while Mexico's national holiday on Monday will leave only four harvest days next week. With just three days of normal harvesting since operations resumed, inventories remain difficult to replenish. Pricing remains elevated and is expected to stay at higher levels for the next several weeks, with continued limited availability and potential prorations as supplies gradually recover. Current size curve is peaking on 48 and 60 counts.

Bananas: Banana supply will be stable, but production is being curtailed due to virus pressure, low yields, and rising costs. Though quality is very good and current supply is adequate, consistency will be crucial. To navigate the coming year, ensure consistent supply, maintain regular ordering patterns, and proactively address any potential issues impacting the Banana program. Bunker rates will be released this week and next; expect them to be higher due to rising fuel costs.

Pineapples: WATCHLIST Supplies have tightened up, and we have seen an increase in open market pricing. Contract volume is holding firm, but open market availability has dropped. Suppliers are expecting this to last for 2 to 4 weeks. This should not affect quality, which has been good overall but may impact sizing and the need to sub to different sizing over the next few weeks.

Table Grapes: WATCHLIST Production is almost done out of California on storage fruit and will need to transition over to imports. Quality on the remaining domestic fruit will be marginal and will begin to see more shatter, dehydrated stems, discoloration, and possibly decay. We will begin to transition to 100 percent offshore this week on reds and expect to have greens next week. We should be 100 percent out of domestic grapes by end of month.

Berries

Strawberries: ESCALATED Strawberry supplies remain extremely limited as California production declines and winter growing regions slowly increase volume. Repeated rain events and periods of heat have accelerated California's seasonal decline and prevented fields from fully recovering. Santa Maria production continues to decrease, with some operations reporting field losses of approximately 85% following the initial October rain event. Watsonville and Salinas volumes are also declining rapidly as weather challenges persist and growers shift acreage toward spring planting. Mexican production remains light following late-season hurricane impacts and has not increased as quickly as anticipated. Although projections are improving weekly, available supplies remain insufficient to offset California's decline or meet total contract demand. Florida production is still in its early stages, with very light volumes and gradual increases expected as the season progresses. Rain is forecast for California growing regions beginning Friday, November 13, with additional rainfall possible the following week. If these events materialize, California production could decline further, increasing reliance on Mexico and potentially reducing fill rates. Without additional rainfall, supplies and fill rates are expected to remain near current levels. Continued prorations, potential order cancellations, and loading adjustments are expected as growers work to recover as much marketable fruit as possible. Meaningful supply relief is not anticipated until approximately the second or third week of December, depending on weather conditions and production increases in Mexico and Florida.

Blackberries: WATCHLIST Blackberry volumes are somewhat steady in Mexico, with direct exports to Texas underway, although organic availability remains light. Watsonville production is winding down, and availability is limited. Quality is generally good across both regions, with some softness and leaking fruit reported.

Raspberries: WATCHLIST Raspberry supplies from Mexico remain on par this week, with exports already moving into Texas. Rainfall has had a slight impact on quality, which remains fair to good overall. Some reduction in shelf life may be experienced over the next few weeks as the industry works through rain-affected fruit. Expect tighter availability and potential upward pricing pressure until production stabilizes.

Blueberries: Peru remains the primary source over the next few weeks before production begins to wind down and supply transitions to Mexico. Peruvian volumes remain slightly below expectations, consistent with typical seasonal availability. Quality remains excellent across both conventional and organic offerings. Overall supplies are expected to improve in December as production from Mexico and Chile increases.

Citrus

Limes: ESCALATED Supply will slowly turn the corner over the coming weeks, and we should see some relief on FOB prices in general across all sizes. Currently we continue to battle sizing issues on new crop, with distribution skewing heavily toward 200s and smaller. Unfortunately, this is limiting larger sized fruit and there is a need to substitute with smaller sizes. We will continue to see this until the size curve stabilizes. Overall quality will continue to be a concern: external blemishes, oleocellosis, and limited shelf life may occur.

Lemons: Small lemons remain in tight supply.

Navels: In full swing with good suppliers.

Valencias: Done for the season.

West Coast Lettuce

Iceberg: ESCALATED Lettuce quality is good and supplies are improving. We are still seeing some reports of small heads, lighter weights, internal burn, wind burn, and soil-related defects but quality is improving. Huron and Yuma are beginning to provide some relief. The lettuce market is now trending down.

Iceberg VA: ESCALATED Quality is good and supplies are improving.

Romaine & Romaine Hearts: ESCALATED Supplies and quality are good. There are still some reports of light weights, tip and fringe burn but quality and supplies are improving as we move into Yuma.

Romaine VA: ESCALATED - Quality and supplies are good. We are still seeing some core in the bags and some mildew but quality is improving with Yuma supplies.

Boston/Butter Lettuce: **ESCALATED** Quality is good, and supplies are improving.

Green Leaf, Better Burger and Red Leaf: ESCALATED Quality is good and supplies are improving.

Green Bell Pepper: Supply is lighter out of California and South Georgia; markets are expected to firm up. Quality is good.

Color Bell Pepper: Supply is tightening this week as coastal California regions begin to wind down for the season, and we prepare for transition to the desert. The Hothouse Pepper category has also turned the corner and firmed up.

Jicama: Good supply and good quality available.

Mini Sweet Pepper: Supply lighter this week and expected for the next several weeks. Quality is good.

Mixed Chili Pepper: ESCALATED Supplies are lighter this week on all varieties with local deals wrapping up and delays in the harvest schedule in some of the newer production regions. We expect to see potential prorates; quality issues and sizing will be mixed until we completely transition. Pricing per pound is expected to be much higher through Christmas.

Tomatillo: ESCALATED Very tight this week and supply is expected to be short through Thanksgiving.

Eggplant: Improving supply out of Nogales and the desert in the west. Good supply available out of South Georgia. Overall quality is good.

Slicer Cucumbers: Supplies crossing through Nogales and McAllen; Baja is wrapping up for the season. In the East, we are seeing good supply out of South Georgia. Quality is good from all shipping points.

English Cucumbers: Steady supply and softer markets are putting downward pressure on the spot market this week out of Mexico. Quality is good.

Pickles: Lighter supply is available out of Baja and South Georgia. Markets remain firm and quality is good.

Green Beans: ESCALATED Round Type: Limited supply and high demand for the holidays will keep upward pressure on pricing out of South Georgia, Baja and Coachella. Overall quality is good.

French Beans: WATCHLIST French bean supplies from Mexico remain limited due to rainfall. Weather-related challenges are also limiting both conventional and organic supplies from Guatemala, where production and quality are expected to improve over the next few weeks.

Zucchini/Yellow Squash: Improving supply out of South Georgia and Mexico crossing in Nogales available this week. Quality is good.

Herbs: WATCHLIST Basil production, quality, and supply remain good across both regions. On the East Coast, all Herbs, including imported Chervil, are readily available. On the West Coast, most Herbs have steady supplies and fair quality, although Chervil, Thai Basil, Tarragon, and Marjoram remain limited due to heat.

Melons
Overview: Yuma will wrap up for the season this week and transition to offshore production early next week.

Cantaloupe: Production out of Guatemala is primarily 9's and 12's with limited jumbos available. Brix levels are lower ranging from 10-14 percent. External color is a tad greener than normal, but netting is good. We expect improving quality and condition over the coming 3-4 weeks.

Honeydew: Current production consists almost entirely of jumbo fruit. Still seeing peak sizing 4Js and 5Js, leaving 6s and 8s in very limited supply. We are exploring alternative ways to meet demand for smaller fruit, including packing 6Js or sourcing honeydews to ship with cantaloupes. As is typical for Yuma, honeydews may show some external scarring but are of sound overall quality.

Watermelon: The market is starting to transition the late-season US crop from Texas to imports. Most imports will start coming from Mexico. Pricing is steady even with lower supplies as demand tapers off. Quality throughout the growing regions has been good.

Mixed Vegetables
Artichokes: Quality and supplies have improved.

Asparagus: EXTREME Asparagus supplies remain extremely limited, with industry volumes estimated at just 50% to 55% of normal at best. Weather continues to reduce Mexican production, while Southern Peru is nearing the end of its season. Northern Peru's production remains concentrated in smaller sizes, with larger sizes expected to remain particularly limited through year-end. Markets are extremely active, pricing continues to rise, and significant prorations are expected. No meaningful short-term improvement is expected, and current grower outlooks suggest substantial recovery may not occur until late in the third quarter of 2027. Mexico's Caborca season, which typically begins in late January or early February, is also expected to produce limited volumes.

Bok Choy: Quality is okay and supplies are limited.

Broccoli Florets/Broccoli Crowns: Quality is good, and supplies have improved. Reports of browning and pin rot continue. Given the heavy insect pressure, we will continue to monitor this item but Yuma supplies will help quality and supplies.

Broccolini and Sweet Baby Broccoli: Quality is good, but supplies are limited. Growers are holding to average order volumes, and we will continue to monitor this item due to ongoing heavy insect pressure.

Brussels Sprouts: Quality is good, and supplies have improved but remain limited.

Carrots (JUMBOS, MEDIUMS and CELLOS): Quality and supplies are good.

Cauliflower: EXTREME Quality is okay. Supplies are light. Insect pressure is still affecting some yields.

Celery: Quality and supplies are good but the market is rising. Supplies will get light as we get closer to the holidays and the market will escalate. Organic Celery remains at the extreme level.

Corn, Sweet: Lighter supply and higher demand for the holidays are pushing pricing higher loading at all locations. We do expect elevated pricing through the holidays. Quality is good out of all regions.

Fennel: Quality and supplies have improved.

Kale: Quality and supplies look good..

Leeks: Quality and supplies look okay.

Garlic: Quality remains good, although supply is snug on this Garlic crop. Continue to purchase steadily to ensure product as the year progresses.

Ginger: Supplies and markets are steady.

Green Cabbage: **ESCALATED** Quality and supplies are improving as we transition to Yuma. The market is trending down.

Green Onions: Quality and supplies have improved. The market is no longer escalated.

Mushrooms: WATCHLIST Extra volume is expected to decrease over the coming weeks as retail demand increases ahead of the holidays. Thanksgiving is just a month away! Overall quality is good; however, green mold may affect production in northern growing regions. Cremini volumes have declined significantly, potentially due to this issue. We are not currently experiencing problems with our grower partners but prorates may occur over the coming weeks. We have been advised that cremini production could be affected through November.

Napa Cabbage: ESCALATED Quality is good, but supplies remain light.

Parsley (Italian & Curly): Quality is good, but supplies are tightening up. Italian Parsley 60ct remains escalated.

Rapini: Quality is good, but supply continues to be light. The market is strong; therefore, supplies are expected to remain light.

Red Cabbage: Quality and supplies look good.

Spinach: Quality and supplies look good.

Spring Mix: Supplies are limited and quality is okay. We are starting to see some decreased shelf-life. All Leafy Greens are affected by disease pressure.

Snow Peas and Sugar Snaps: ESCALATED Guatemalan snow pea and sugar snap supplies remain extremely limited, with improvement expected in mid-to-late November. Domestic availability is also limited due to weather-related challenges and field transitions. Mexican production is expected to begin in mid-November, providing additional supply as volumes build.

Onions: The transition to the NW, Washington, Oregon, and Idaho is done. Overall, the market is still struggling to keep up with demand, elevating open market pricing. NW suppliers are reporting less volume on colossal and super colossal sizing due to extended periods of smoke from neighboring wildfires and heat.

Potatoes: WATCHLIST Growers have completed the potato harvest for the season and are shipping from the new crop as storage inventories are established. Reduced acreage, water limitations, and high nighttime temperatures have contributed to smaller sizing, leaving 40- through 70-count supplies extremely tight, with limited availability expected throughout the season. Smaller 80- through 120-count potatoes remain more readily available. Market pricing remains elevated and continues to strengthen on larger sizes.

Sweet Potatoes: **WATCHLIST** The 2026-2027 sweet potato harvest is nearing completion, with increased acreage and favorable harvest conditions supporting a larger crop this year. Early-harvested product has completed the sweat process and is now available for shipment, with overall quality reported as good. Supplies are expected to remain steady throughout the season, with additional availability in larger sizes, particularly jumbos. Pricing is expected to remain stable for the foreseeable future.

Tomatoes:

Tomato Suspension Agreement Update

Currently, duties are being imposed on Mexican Tomatoes. We do expect to see some reporting from the ITC on the impacts of duties and anti-dumping violations sometime this year. No major immediate changes are anticipated.

Q4 Updates: Quarter 4 is upon us, and we need to remember this can be the most challenging time of year for the Tomato supply chain with local and seasonal production winding down for the season. We will begin transitioning to Florida in the coming weeks as well as Mainland Mexico for the winter months, with a Super El Niño season expected. We want to be prepared for any vulnerability to weather-related pressure on supply. We will continue to monitor the weather in all growing regions as well as receive updates from our grower partners and provide that information to you as soon as possible.

East Coast

- **Round Tomatoes: ESCALATED** Volume is mixed this week, and demand continues to exceed supply. Quality also varies across regions. Florida should see additional volume this week; however, it will not be enough to meet demand. We do not expect relief from Florida for another three weeks.
- **Roma Tomatoes: ESCALATED** Supply will remain light in South Georgia and Florida this week and should begin improving next week, with additional volume anticipated the following week. Quality is fair at best due to weather-related pressure. As with round tomatoes, significant relief is not expected until Florida production ramps up.
- **Snacking Tomatoes: Grapes, Grape Medley and Cherry Tomato: EXTREME** Volumes of cherry, grape, and medley tomatoes will gradually improve out of Florida over the next ten days. Quality is fair at best. We expect market volatility over the next two to three weeks.

Mexico

- **Round Tomatoes: ESCALATED** Supply will be tighter on all sizes this week, particularly the larger sized fruit. This scenario, combined with overall higher demand, will keep prices higher this week. Quality is outstanding on what is crossing this week.
- **Roma Tomatoes: ESCALATED** Stable supply and quality available out of Jalisco and Baja. Demand is very good this week putting upward pressure on prices. The driver for this is high demand from the East and lower production numbers out of Baja.
- **Snacking Tomatoes: Grapes, Grape Medley and Cherry Tomato: EXTREME** A combination of events between the East Coast and West Coast being shorter than expected, markets will be firm across the category out west with possibilities of supply interruptions. Quality on the product loading in the west is far better than the east on all varieties.

Other Fruit:

Apples: New crop Gala Apples are being harvested, and inventory is building up. Granny Smiths are reported to have good sizing available. Red Delicious sizing is on the larger end, 56-80ct. Fuji and Gold Delicious both have very limited storage supplies left, and new crop will start soon. New crop Honeycrisp Apples have started, and good volume is available.

Pears: D'Anjou availability is limited; volume from both domestic and imports has dried up. The market remains stable, with new crop Bartletts. Red D'Anjou Pears are moderately available in U.S. #1 35–55ct sizes and should remain in the market for another couple of weeks. Bosc Pears are currently gapping until their respective new crop harvests.

Persimmons: New crop FUYU and Hachiya available out of California.

Pomegranate: Good supply available; new crop out of California.

Asian Pears: Lighter volume, good supply on larger sizes.

Cherries: Limited availability on offshore fruit this week.

Stone Fruit: Limited/ Done for the domestic season.

Papaya: Maradol are steady out of Mexico, while Solos and Hawaiians are tight.

Mangoes: Steady supply out of Mexico and Brazil. Varieties: Tommy's, Kents, Palmer and Keitts.

Kiwi Fruit: Supplies are fair out of Chile; California Kiwi Berries available. Some Golden Kiwis are also available.

Quince: Limited supply available this week.

Figs: Black Mission and Brown Turkey available out of California.
